

## **ChatGPT prompt to create pointers for your experience section, project section.**

I want to create resume bullet points using the following format based on my project experience:

Tool Used:

Quantifiable Impact (not just % - can include data volume, time saved, frequency, automation count, etc.):

Impact Made (what value it created - e.g., improved performance, reduced latency, enabled real-time analytics, etc.):

Please use this structure to generate action-oriented bullet points for my experience section, just like the example below:

Example I like:

Improved data processing efficiency by 30% through Spark-Hive and Spark-HBase integrations, reducing latency in real-time and batch processing scenarios.

Do, consider my project as well, provide your project brief here = explain in 5-6 lines what your project is.

and Tools you want to get points for = example - databricks/adf/sql/python
