#_ Exploratory Data Analysis (EDA) with Pandas [cheatSheet]

1. Data Loading

- Read CSV File: df = pd.read_csv('filename.csv')
- Read Excel File: df = pd.read_excel('filename.xlsx')
- Read from SQL Database: df = pd.read_sql(query, connection)

2. Basic Data Inspection

- Display Top Rows: df.head()
- Display Bottom Rows: df.tail()
- Display Data Types: df.dtypes
- Summary Statistics: df.describe()
- Display Index, Columns, and Data: df.info()

3. Data Cleaning

- Check for Missing Values: df.isnull().sum()
- Fill Missing Values: df.fillna(value)
- Drop Missing Values: df.dropna()
- Rename Columns: df.rename(columns={'old_name': 'new_name'})
- **Drop Columns**: df.drop(columns=['column_name'])

4. Data Transformation

- Apply Function: df['column'].apply(lambda x: function(x))
- Group By and Aggregate: df.groupby('column').agg({'column': 'sum'})
- Pivot Tables: df.pivot_table(index='column1', values='column2', aggfunc='mean')
- Merge DataFrames: pd.merge(df1, df2, on='column')
- Concatenate DataFrames: pd.concat([df1, df2])

5. Data Visualization Integration

- Histogram: df['column'].hist()
- Boxplot: df.boxplot(column=['column1', 'column2'])

```
 Scatter Plot: df.plot.scatter(x='col1', y='col2')
 Line Plot: df.plot.line()
 Bar Chart: df['column'].value_counts().plot.bar()
```

6. Statistical Analysis

- Correlation Matrix: df.corr()
- Covariance Matrix: df.cov()
- Value Counts: df['column'].value_counts()
- Unique Values in Column: df['column'].unique()
- Number of Unique Values: df['column'].nunique()

7. Indexing and Selection

- Select Column: df['column']
- Select Multiple Columns: df[['col1', 'col2']]
- Select Rows by Position: df.iloc[0:5]
- Select Rows by Label: df.loc[0:5]
- Conditional Selection: df[df['column'] > value]

8. Data Formatting and Conversion

- Convert Data Types: df['column'].astype('type')
- String Operations: df['column'].str.lower()
- Datetime Conversion: pd.to_datetime(df['column'])
- Setting Index: df.set_index('column')

9. Advanced Data Transformation

- Lambda Functions: df.apply(lambda x: x + 1)
- Pivot Longer/Wider Format: df.melt(id_vars=['col1'])
- Stack/Unstack: df.stack(), df.unstack()
- Cross Tabulations: pd.crosstab(df['col1'], df['col2'])

10. Handling Time Series Data

- Set Datetime Index: df.set_index(pd.to_datetime(df['date']))
- Resampling Data: df.resample('M').mean()

• Rolling Window Operations: df.rolling(window=5).mean()

11. File Export

- Write to CSV: df.to_csv('filename.csv')
- Write to Excel: df.to_excel('filename.xlsx')
- Write to SQL Database: df.to_sql('table_name', connection)

12. Data Exploration Techniques

- Profile Report (with pandas-profiling): from pandas_profiling import
 ProfileReport; ProfileReport(df)
- Pairplot (with seaborn): import seaborn as sns; sns.pairplot(df)
- Heatmap for Correlation (with seaborn): sns.heatmap(df.corr(), annot=True)

13. Advanced Data Queries

- Query Function: df.query('column > value')
- Filtering with isin: df[df['column'].isin([value1, value2])]

14. Memory Optimization

- Reducing Memory Usage: df.memory_usage(deep=True)
- Change Data Types to Save Memory: df['column'].astype('category')

15. Multi-Index Operations

- Creating MultiIndex: df.set_index(['col1', 'col2'])
- Slicing on MultiIndex: df.loc[(slice('index1_start', 'index1_end'), slice('index2_start', 'index2_end'))]

16. Data Merging Techniques

- Outer Join: pd.merge(df1, df2, on='column', how='outer')
- Inner Join: pd.merge(df1, df2, on='column', how='inner')
- Left Join: pd.merge(df1, df2, on='column', how='left')
- Right Join: pd.merge(df1, df2, on='column', how='right')

17. Dealing with Duplicates

- Finding Duplicates: df.duplicated()
- Removing Duplicates: df.drop_duplicates()

18. Custom Operations with Apply

 Custom Apply Functions: df.apply(lambda row: custom_func(row['col1'], row['col2']), axis=1)

19. Handling Large Datasets

- Chunking Large Files: pd.read_csv('large_file.csv', chunksize=1000)
- Iterating Through Data Chunks: for chunk in pd.read_csv('file.csv', chunksize=500): process(chunk)

20. Integration with Matplotlib for Custom Plots

 Custom Plotting: import matplotlib.pyplot as plt; df.plot(); plt.show()

21. Specialized Data Types Handling

- Working with Categorical Data: df['column'].astype('category')
- Dealing with Sparse Data: pd.arrays.SparseArray(df['column'])

22. Performance Tuning

- Using Swifter for Faster Apply: import swifter;
 df['column'].swifter.apply(lambda x: func(x))
- Parallel Processing with Dask: import dask.dataframe as dd; ddf = dd.from_pandas(df, npartitions=10)

23. Visualization Enhancement

- Customize Plot Style: plt.style.use('ggplot')
- Histogram with Bins Specification: df['column'].hist(bins=20)
- Boxplot Grouped by Category: df.boxplot(column='num_column', by='cat_column')

24. Advanced Grouping and Aggregation

- Group by Multiple Columns: df.groupby(['col1', 'col2']).mean()
- Aggregate with Multiple Functions: df.groupby('col').agg(['mean', 'sum'])
- Transform Function: df.groupby('col').transform(lambda x: x x.mean())

25. Time Series Specific Operations

- Time-Based Grouping: df.groupby(pd.Grouper(key='date_col', freq='M')).sum()
- Shifting Series for Lag Analysis: df['column'].shift(1)
- Resample Time Series Data: df.resample('M', on='date_col').mean()

26. Text Data Specific Operations

- String Contains: df[df['column'].str.contains('substring')]
- **String Split**: df['column'].str.split(' ', expand=True)
- Regular Expression Extraction: df['column'].str.extract(r'(regex)')

27. Data Normalization and Standardization

- Min-Max Normalization: (df['column'] df['column'].min()) / (df['column'].max() - df['column'].min())
- **Z-Score Standardization**: (df['column'] df['column'].mean()) / df['column'].std()

28. Working with JSON and XML

- Reading JSON: df = pd.read_json('filename.json')
- Reading XML: df = pd.read_xml('filename.xml')

29. Advanced File Handling

- Read CSV with Specific Delimiter: df = pd.read_csv('filename.csv', delimiter=';')
- Writing to JSON: df.to_json('filename.json')

30. Dealing with Missing Data

- Interpolate Missing Values: df['column'].interpolate()
- Forward Fill Missing Values: df['column'].ffill()
- Backward Fill Missing Values: df['column'].bfill()

31. Data Reshaping

- Wide to Long Format: pd.wide_to_long(df, ['col'], i='id_col', j='year')
- Long to Wide Format: df.pivot(index='id_col', columns='year', values='col')

32. Categorical Data Operations

- Convert Column to Categorical: df['column'] = df['column'].astype('category')
- Order Categories: df['column'].cat.set_categories(['cat1', 'cat2'], ordered=True)

33. Advanced Indexing

- Reset Index: df.reset_index(drop=True)
- Set Multiple Indexes: df.set_index(['col1', 'col2'])
- MultiIndex Slicing: df.xs(key='value', level='level_name')

34. Efficient Computations

- Use of eval() for Efficient Operations: df.eval('col1 + col2')
- Query Method for Filtering: df.query('col1 < col2')

35. Integration with SciPy and StatsModels

- Linear Regression (with statsmodels): import statsmodels.api as sm; sm.OLS(y, X).fit()
- Kurtosis and Skewness (with SciPy): from scipy.stats import kurtosis, skew; kurtosis(df['column']), skew(df['column'])

36. Handling Large Data Efficiently

- Dask Integration for Large Data: import dask.dataframe as dd; ddf = dd.from_pandas(df, npartitions=10)
- Sampling Data for Quick Insights: df.sample(n=1000)

37. Advanced Data Merging

- **SQL-like Joins**: pd.merge(df1, df2, how='left', on='col')
- Concatenating Along a Different Axis: pd.concat([df1, df2], axis=1)

38. Profiling Data for Quick Insights

 Using Pandas Profiling for Quick Analysis: from pandas_profiling import ProfileReport; report = ProfileReport(df)

39. Working with External Data Sources

- Reading Data from HTML: dfs = pd.read_html('http://example.com')
- Connecting to α SQL Database: from sqlalchemy import create_engine;
 engine = create_engine('sqlite:///db.sqlite');
 pd.read_sql('SELECT * FROM table_name', engine)

40. Data Quality Checks

 Assert Statement for Data Validation: assert df.notnull().all().all(), "There are missing values in the dataframe"
