Python For Data Science Cheat Sheet **Python Basics**

Variables and Data Types

Variable Assignment

```
>>> x=5
>>> x
5
```

Calculations With Variables

>>> x+2	Sum of two variables
7 >>> x-2	Subtraction of two variables
3 >>> x*2	Multiplication of two variables
10 >>> x**2	Exponentiation of a variable
25 >>> x%2	Remainder of a variable
>>> x/float(2)	Division of a variable
2.5	

Types and Type Conversion

str()	'5', '3.45', 'True'	Variables to strings
int()	5, 3, 1	Variables to integers
float()	5.0, 1.0	Variables to floats
bool()	True, True, True	Variables to booleans

Asking For Help

>>> help(str)

Strings

```
>>> my string = 'thisStringIsAwesome'
>>> my string
'thisStringIsAwesome'
```

String Operations

```
>>> my string * 2
 'thisStringIsAwesomethisStringIsAwesome'
>>> my string + 'Innit'
 'thisStringIsAwesomeInnit'
>>> 'm' in my string
```

Lists

Also see NumPy Arrays

```
>>> a = 'is'
>>> b = 'nice'
>>> my list = ['my', 'list', a, b]
>>>  my list2 = [[4,5,6,7], [3,4,5,6]]
```

Selecting List Elements

Index starts at o

Subset

```
>>> my list[1]
>>> my list[-3]
Slice
```

- >>> my list[1:3] >>> my list[1:] >>> my list[:3]
- >>> my list[:]

Subset Lists of Lists

>>> my list2[1][0] >>> my list2[1][:2]

Select items at index 1 and 2 Select items after index o

Select items before index 3

Select item at index 1

Select 3rd last item

- Copy my list
- my list[list][itemOfList]

List Operations

```
>>> my list + my list
['my', 'list', 'is', 'nice', 'my', 'list', 'is', 'nice']
>>> my list * 2
['my', 'list', 'is', 'nice', 'my', 'list', 'is', 'nice']
>>> my list2 > 4
```

List Methods

Get the index of an item
Count an item
Append an item at a tim
Remove an item
Remove an item
Reverse the list
Append an item
Remove an item
Insert an item
Sort the list

String Operations

Index starts at o

```
>>> my string[3]
>>> my string[4:9]
```

String Methods

_			
>>>	<pre>my_string.upper()</pre>		String to uppercase
>>>	<pre>my_string.lower()</pre>		String to lowercase
>>>	<pre>my_string.count('w')</pre>		Count String elements
>>>	<pre>my_string.replace('e',</pre>	'i')	Replace String elements
>>>	my string.strip()		Strip whitespaces

Libraries

Import libraries

- >>> import numpy
- >>> import numpy as np Selective import

pandas 🖳 💥 📈 Data analysis

NumPy

4 matplotlib Scientific computing 2D plotting

Install Python

Leading open data science platform powered by Python

Free IDE that is included with Anaconda

Create and share documents with live code. visualizations, text. ...

Numpy Arrays

Also see Lists

```
>>>  my list = [1, 2, 3, 4]
>>> my array = np.array(my list)
>>>  my 2darray = np.array([[1,2,3],[4,5,6]])
```

Selecting Numpy Array Elements

Index starts at o

Subset >>> my array[1]

Slice

>>> my array[0:2] array([1, 2])

Subset 2D Numpy arrays

>>> my 2darray[:,0] array([1, 4])

Select item at index 1

Select items at index 0 and 1

my 2darray[rows, columns]

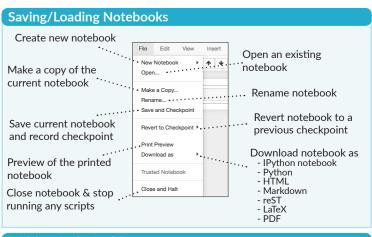

Numpy Array Operations

```
>>> my array > 3
 array([False, False, False, True], dtype=bool)
>>> my array * 2
  array([2, 4, 6, 8])
>>> my array + np.array([5, 6, 7, 8])
 array([6, 8, 10, 12])
```

Numpy Array Functions

```
>>> my array.shape
                                      Get the dimensions of the array
>>> np.append(other array)
                                      Append items to an array
>>> np.insert(my array, 1, 5)
                                      Insert items in an array
>>> np.delete(my array,[1])
                                      Delete items in an array
>>> np.mean(my array)
                                      Mean of the array
>>> np.median(my array)
                                      Median of the array
>>> my array.corrcoef()
                                      Correlation coefficient
>>> np.std(my array)
                                      Standard deviation
```

Python For Data Science Cheat Sheet Jupyter Notebook

Writing Code And Text

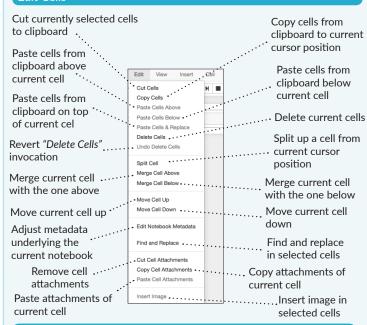

Code and text are encapsulated by 3 basic cell types: markdown cells, code cells, and raw NBConvert cells.

Edit Cells

Insert Cells

current one

Add new cell above the

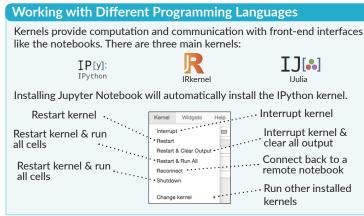

Cell

Insert Cell Relow

Add new cell below the

current one

Widgets

Notebook widgets provide the ability to visualize and control changes in your data, often as a control like a slider, textbox, etc.

You can use them to build interactive GUIs for your notebooks or to synchronize stateful and stateless information between Python and JavaScript.

Download serialized state of all widget models in use Save notebook with Widgets widgets with interactive widgets widgets widgets Embed current widgets

Asking For Help

Python For Data Science Cheat Sheet **NumPy Basics**

NumPy

The **NumPy** library is the core library for scientific computing in Python. It provides a high-performance multidimensional array object, and tools for working with these arrays.

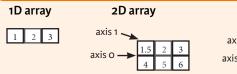

Use the following import convention: >>> import numpy as np

3D array

axis 2

NumPy Arrays

Creating Arrays

```
>>> a = np.array([1,2,3])
>>> b = np.array([(1.5,2,3), (4,5,6)], dtype = float)
>>> c = np.array([[(1.5,2,3), (4,5,6)], [(3,2,1), (4,5,6)]],
                 dtype = float)
```

Initial Placeholders

>>> np.zeros((3,4))	Create an array of zeros
>>> np.ones((2,3,4),dtype=np.int16)	Create an array of ones
>>> d = np.arange(10,25,5)	Create an array of evenly
	spaced values (step value)
>>> np.linspace(0,2,9)	Create an array of evenly
	spaced values (number of samples)
>>> e = np.full((2,2),7)	Create a constant array
>>> f = np.eye(2)	Create a 2X2 identity matrix
>>> np.random.random((2,2))	Create an array with random values
>>> np.empty((3,2))	Create an empty array

1/0

Saving & Loading On Disk

```
>>> np.save('my_array', a)
>>> np.savez('array.npz', a, b)
>>> np.load('my array.npy')
```

Saving & Loading Text Files

```
>>> np.loadtxt("myfile.txt")
>>> np.genfromtxt("my file.csv", delimiter=',')
>>> np.savetxt("myarray.txt", a, delimiter=" ")
```

Data Types

>>> np.int64	Signed 64-bit integer types
>>> np.float32	Standard double-precision floating point
>>> np.complex	Complex numbers represented by 128 floats
>>> np.bool	Boolean type storing TRUE and FALSE values
>>> np.object	Python object type
>>> np.string_	Fixed-length string type
>>> np.unicode_	Fixed-length unicode type

Inspecting Your Array

>>> a.shape	Array dimensions
>>> len(a)	Length of array
>>> b.ndim	Number of array dimensions
>>> e.size	Number of array elements
>>> b.dtype	Data type of array elements
>>> b.dtype.name	Name of data type
>>> b.astvpe(int)	Convert an array to a different type

Asking For Help

>>> np.info(np.ndarray.dtype)

Array Mathematics

Arithmetic Operations

>>> q = a - b	Subtraction
array([[-0.5, 0. , 0.],	Subtraction
[-3. , -3. , -3.]])	
>>> np.subtract(a,b)	Subtraction
>>> b + a	Addition
array([[2.5, 4. , 6.],	
[5., 7., 9.]])	
>>> np.add(b,a)	Addition
>>> a / b	Division
array([[0.66666667, 1. , 1.] [0.25 , 0.4 , 0.5]	
>>> np.divide(a,b)	Division
>>> a * b	Multiplication
array([[1.5, 4., 9.],	a.c.p.i.eacieri
[4., 10., 18.]])	
>>> np.multiply(a,b)	Multiplication
>>> np.exp(b)	Exponentiation
>>> np.sqrt(b)	Square root
>>> np.sin(a)	Print sines of an array
>>> np.cos(b)	Element-wise cosine
>>> np.log(a)	Element-wise natural logarith
>>> e.dot(f)	Dot product
array([[7., 7.],	
[7., 7.]])	

<pre>>>> a == b array([[False, True, True],</pre>	Element-wise comparison
<pre>[False, False, False]], dtype=bool) >>> a < 2 array([True, False, False], dtype=bool)</pre>	Element-wise comparison
	Array-wise comparison

Aggregate Functions

>>> a.sum()	Array-wise sum
>>> a.min()	Array-wise minimum value
>>> b.max(axis=0)	Maximum value of an array row
>>> b.cumsum(axis=1)	Cumulative sum of the elements
>>> a.mean()	Mean
>>> b.median()	Median
>>> a.corrcoef()	Correlation coefficient
>>> np.std(b)	Standard deviation

Copying Arrays

>>> h = a.view()	Create a view of the array with the same data
>>> np.copy(a)	Create a copy of the array
>>> h = a.copy()	Create a deep copy of the array

Sorting Arrays

>>> a.sort() >>> c sort(axis=0)	Sort an array Sort the elements of an array's axis
>>> c.sort(axis=0)	Sort the elements of an array's axis

Subsetting, Slicing, Indexing

1 2 3

1.5 2 3

1 2 3

Subsetting

>>> a[2]

>>> b[1,2]

>>> a[0:2]

>>> b[:1]

array([1, 2])

array([2., 5.])

array([[1.5, 2., 3.]])

array([[[3., 2., 1.], [4., 5., 6.]]])

>>> b[0:2,1]

>>> c[1,...]

>>> a[: :-1]

>>> a[a<2]

array([1])

Fancy Indexing

array([3, 2, 1]) **Boolean Indexing**

6.0 Slicing

```
Also see Lists
Select the element at the 2nd index
```

(equivalent to b[1][2]) Select items at index 0 and 1

Select items at rows 0 and 1 in column 1

Select the element at row o column 2

Select all items at row o (equivalent to b[0:1, :]) Same as [1,:,:]

Reversed array a

Select elements from a less than 2

Select elements (1,0), (0,1), (1,2) and (0,0)

Select a subset of the matrix's rows and columns

Array Manipulation

>>> b[[1, 0, 1, 0], [0, 1, 2, 0]]

>>> b[[1, 0, 1, 0]][:,[0,1,2,0]]

array([4. , 2. , 6. , 1.5])

Transposing Array >>> i = np.transpose(b) >>> i.T

Changing Array Shape

```
>>> b.ravel()
>>> g.reshape(3,-2)
```

Adding/Removing Elements

>>>	h.resize((2,6))
>>>	np.append(h,g)
>>>	np.insert(a, 1, 5)
>>>	np.delete(a,[1])

Combining Arrays

```
>>> np.concatenate((a,d),axis=0)
  array([ 1, 2, 3, 10, 15, 20])
>>> np.vstack((a,b))
 array([[ 1., 2., 3.], [ 1.5, 2., 3.], [ 4., 5., 6.]])
>>> np.r [e,f]
>>> np.hstack((e,f))
array([[ 7., 7., 1., 0.],
         [ 7., 7., 0., 1.]])
>>> np.column stack((a,d))
  array([[ 1, 10],
           2, 15],
          [ 3, 20]])
>>> np.c [a,d]
```

Splitting Arrays

```
>>> np.hsplit(a,3)
  [array([1]),array([2]),array([3])]
>>> np.vsplit(c,2)
[array([[[ 1.5, 2., 1. ], [ 4., 5., 6. ]]]), array([[[ 3., 2., 3.], [ 4., 5., 6.]]])]
```

Permute array dimensions Permute array dimensions

Flatten the array Reshape, but don't change data

Return a new array with shape (2,6) Append items to an array Insert items in an array Delete items from an array

Concatenate arrays

Stack arrays vertically (row-wise)

Stack arrays vertically (row-wise) Stack arrays horizontally (column-wise)

Create stacked column-wise arrays

Create stacked column-wise arrays

Split the array horizontally at the 3rd

Split the array vertically at the 2nd index

Python For Data Science *Cheat Sheet* SciPv - Linear Algebra

SciPy

The SciPy library is one of the core packages for scientific computing that provides mathematical algorithms and convenience functions built on the NumPy extension of Python.

Interacting With NumPy

Also see NumPy

```
>>> import numpy as np
>>> a = np.array([1,2,3])
>>> b = np.array([(1+5j,2j,3j), (4j,5j,6j)])
>>> c = np.array([[(1.5,2,3), (4,5,6)], [(3,2,1), (4,5,6)]])
```

Index Tricks

	Create a dense meshgrid Create an open meshgrid
>>> np.r_[[3,[0]*5,-1:1:10j]	Stack arrays vertically (row-wise)
>>> np.c_[b,c]	Create stacked column-wise arrays

Shape Manipulation

nn-wise)
e)
e 2nd index
nd index
e) ie

Polynomials

>>>	from numpy	import polyid	
>>>	p = poly1d	([3,4,5])	Create a polynomial object

Vectorizing Functions

```
>>> def myfunc(a):
         if a < 0:
           return a*2
         else.
           return a/2
>>> np.vectorize(myfunc)
                                     Vectorize functions
```

Type Handling

>>> np.	real(c)	Return the real part of the array elements
>>> np.	imag(c)	Return the imaginary part of the array elements
>>> np.r	eal_if_close(c,tol=1000)	Return a real array if complex parts close to o
>>> np.	cast['f'](np.pi)	Cast object to a data type

Other Useful Functions

>>>	np.angle(b,deg=True)	Return the angle of the complex argument
>>>	g = np.linspace(0,np.pi,num=5)	Create an array of evenly spaced values
>>>	g [3:] += np.pi	(number of samples)
>>>	np.unwrap(g)	Unwrap
>>>	np.logspace(0,10,3)	Create an array of evenly spaced values (log scale)
>>>	np.select([c<4],[c*2])	Return values from a list of arrays depending on
		conditions
>>>	misc.factorial(a)	Factorial
>>>	misc.comb(10,3,exact=True)	Combine N things taken at k time
>>>	misc.central_diff_weights(3)	Weights for Np-point central derivative
>>>	misc.derivative(myfunc, 1.0)	Find the n-th derivative of a function at a point

Linear Algebra Also see NumPy

```
You'll use the linalg and sparse modules. Note that scipy. linalg contains and expands on numpy. linalg.
```

```
>>> from scipy import linalg, sparse
```

Creating Matrices

```
>>> A = np.matrix(np.random.random((2,2)))
>>> B = np.asmatrix(b)
>>> C = np.mat(np.random.random((10,5)))
>>> D = np.mat([[3,4], [5,6]])
```

Python For Data Science Cheat Sheet

Pandas Basics

Pandas

The Pandas library is built on NumPy and provides easy-to-use data structures and data analysis tools for the Python programming language.

Use the following import convention:

>>> import pandas as pd

Pandas Data Structures

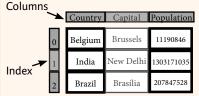

Series

A **one-dimensional** labeled array capable of holding any data type

```
>>> s = pd.Series([3, -5, 7, 4], index=['a', 'b', 'c', 'd'])
```

DataFrame

A two-dimensional labeled data structure with columns of potentially different types

Asking For Help

>>> help(pd.Series.loc)

Selection

Also see NumPy Arrays

Getting

```
>>> s['b']
-5
>>> df[1:]
Country Capital Population
I India New Delhi 1303171035
Brazil Brasília 207847528
```

Get one element

Get subset of a DataFrame

Selecting, Boolean Indexing & Setting

By Position

```
>>> df.iloc([0],[0])
    'Belgium'
>>> df.iat([0],[0])
    'Belgium'
```

By Label

```
>>> df.loc([0], ['Country'])
   'Belgium'
>>> df.at([0], ['Country'])
   'Belgium'
```

By Label/Position

```
>>> df.ix[2]
Country Brazil
Capital Brasilia
Population 207847528
>>> df.ix[:,'Capital']
0 Brussels
1 New Delhi
2 Brasilia
>>> df.ix[1,'Capital']
```

'New Delhi'

Boolean Indexing

```
>>> s[~(s > 1)]
>>> s[(s < -1) | (s > 2)]
>>> df[df['Population']>1200000000]
```

>>> pd.to sql('myDf', engine)

Setting

>>> s['a'] = 6

Select single value by row & column

Select single value by row & column labels

Select single row of subset of rows

Select a single column of subset of columns

Select rows and columns

Series s where value is not >1 s where value is <-1 or >2

Use filter to adjust DataFrame

Set index a of Series s to 6

Read and Write to CSV

```
>>> pd.read_csv('file.csv', header=None, nrows=5)
>>> df.to csv('myDataFrame.csv')
```

Read and Write to Excel

```
>>> pd.read_excel('file.xlsx')
>>> pd.to_excel('dir/myDataFrame.xlsx', sheet_name='Sheet1')
```

Read multiple sheets from the same file

```
>>> xlsx = pd.ExcelFile('file.xls')
>>> df = pd.read_excel(xlsx, 'Sheet1')
```

Read and Write to SQL Query or Database Table

```
>>> from sqlalchemy import create_engine
>>> engine = create_engine('sqlite:///:memory:')
>>> pd.read_sql("SELECT * FROM my_table;", engine)
>>> pd.read_sql_table('my_table', engine)
>>> pd.read_sql_query("SELECT * FROM my_table;", engine)
read_sql() is a convenience wrapper around read_sql_table() and read_sql_query()
```

Dropping

```
>>> s.drop(['a', 'c']) Drop values from rows (axis=0) Prop values from columns(axis=1)
```

Sort & Rank

```
>>> df.sort_index()
>>> df.sort_values(by='Country')
Sort by labels along an axis
Sort by the values along an axis
Assign ranks to entries
```

Retrieving Series/DataFrame Information

Basic Information

Summary

Applying Functions

```
>>> f = lambda x: x*2
>>> df.apply(f) Apply function
>>> df.applymap(f) Apply function element-wise
```

Data Alignment

Internal Data Alignment

NA values are introduced in the indices that don't overlap:

```
>>> s3 = pd.Series([7, -2, 3], index=['a', 'c', 'd'])
>>> s + s3
a 10.0
b NaN
c 5.0
d 7.0
```

Arithmetic Operations with Fill Methods

You can also do the internal data alignment yourself with the help of the fill methods:

```
>>> s.add(s3, fill_value=0)
a 10.0
b -5.0
c 5.0
d 7.0
>>> s.sub(s3, fill_value=2)
>>> s.div(s3, fill_value=4)
>>> s.mul(s3, fill_value=3)
```

Python For Data Science *Cheat Sheet* Scikit-Learn

Scikit-learn

Scikit-learn is an open source Python library that implements a range of machine learning, preprocessing, cross-validation and visualization algorithms using a unified interface.

A Basic Example

```
>>> from sklearn import neighbors, datasets, preprocessing
>>> from sklearn.model selection import train test split
>>> from sklearn.metrics import accuracy score
>>> iris = datasets.load iris()
>>> X, y = iris.data[:, :2], iris.target
>>> X train, X test, y train, y test=train test split(X, y, random state=33)
>>> scaler = preprocessing.StandardScaler().fit(X train)
>>> X train = scaler.transform(X train)
>>> X test = scaler.transform(X test)
>>> knn = neighbors.KNeighborsClassifier(n neighbors=5)
>>> knn.fit(X train, y train)
>>> y pred = knn.predict(X test)
>>> accuracy score(y test, y pred)
```

Loading The Data

Also see NumPy & Pandas

Your data needs to be numeric and stored as NumPy arrays or SciPy sparse matrices. Other types that are convertible to numeric arrays, such as Pandas DataFrame, are also acceptable.

```
>>> import numpy as np
>>> X = np.random.random((10,5))
>>> X[X < 0.7] = 0
```

Training And Test Data

```
>>> from sklearn.model_selection import train_test_split
>>> X train, X test, y train, y test = train test split(X,
                                                  random state=0)
```

Create Your Model

Supervised Learning Estimators

Linear Regression

```
>>> from sklearn.linear model import LinearRegression
>>> lr = LinearRegression(normalize=True)
```

Support Vector Machines (SVM)

```
>>> from sklearn.svm import SVC
>>> svc = SVC(kernel='linear')
```

Naive Baves

>>> from sklearn.naive bayes import GaussianNB

>>> gnb = GaussianNB()

KNN

>>> from sklearn import neighbors >>> knn = neighbors.KNeighborsClassifier(n neighbors=5)

Unsupervised Learning Estimators

Principal Component Analysis (PCA)

>>> from sklearn.decomposition import PCA >>> pca = PCA(n components=0.95)

K Means

>>> from sklearn.cluster import KMeans >>> k means = KMeans(n clusters=3, random state=0)

Model Fitting

Supervised learning

>>> lr.fit(X, y) >>> knn.fit(X train, y train) >>> svc.fit(X train, y train)

Unsupervised Learning

>>> k means.fit(X train)

>>> pca model = pca.fit transform(X train) | Fit to data, then transform it

Fit the model to the data

Fit the model to the data

Prediction

Supervised Estimators

>>> y pred = svc.predict(np.random.random((2,5))) >>> y pred = lr.predict(X test)

>>> y pred = knn.predict proba(X test)

Unsupervised Estimators

Encoding Categorical Features

>>> y pred = k means.predict(X test)

>>> from sklearn.preprocessing import LabelEncoder

Predict labels Predict labels Estimate probability of a label

Predict labels in clustering algos

Preprocessing The Data

Standardization

```
>>> from sklearn.preprocessing import StandardScaler
```

>>> scaler = StandardScaler().fit(X train)

>>> standardized X = scaler.transform(X train) >>> standardized X test = scaler.transform(X test)

Normalization

```
>>> from sklearn.preprocessing import Normalizer
>>> scaler = Normalizer().fit(X train)
>>> normalized X = scaler.transform(X train)
```

>>> normalized X test = scaler.transform(X test)

Binarization

```
>>> from sklearn.preprocessing import Binarizer
>>> binarizer = Binarizer(threshold=0.0).fit(X)
>>> binary X = binarizer.transform(X)
```

Imputing Missing Values

>>> y = enc.fit transform(y)

>>> enc = LabelEncoder()

>>> from sklearn.preprocessing import Imputer >>> imp = Imputer(missing values=0, strategy='mean', axis=0) >>> imp.fit transform(X train)

Generating Polynomial Features

>>> from sklearn.preprocessing import PolynomialFeatures >>> poly = PolynomialFeatures(5)

>>> poly.fit transform(X)

Evaluate Your Model's Performance

Classification Metrics

Accuracy Score

>>> knn.score(X test, y test)

Estimator score method

>>> from sklearn.metrics import accuracy score Metric scoring functions >>> accuracy score(y test, y pred)

Classification Report

>>> from sklearn.metrics import classification report Precision, recall, fi-score >>> print(classification report(y test, y pred)) and support

Confusion Matrix

>>> from sklearn.metrics import confusion matrix >>> print(confusion matrix(y test, y pred))

Regression Metrics

Mean Absolute Error

>>> from sklearn.metrics import mean absolute error >>> y true = [3, -0.5, 2]

>>> mean_absolute_error(y_true, y_pred)

Mean Squared Error

>>> from sklearn.metrics import mean squared error

>>> mean squared error(y test, y pred)

>>> from sklearn.metrics import r2 score >>> r2 score(y true, y_pred)

Clustering Metrics

Adjusted Rand Index

>>> from sklearn.metrics import adjusted rand score >>> adjusted rand score(y true, y pred)

Homogeneity

>>> from sklearn.metrics import homogeneity score

>>> homogeneity score(y true, y pred)

>>> from sklearn.metrics import v measure score >>> metrics.v measure score(y true, y pred)

Cross-Validation

>>> from sklearn.cross validation import cross val score

>>> print(cross val score(knn, X train, y train, cv=4))

>>> print(cross val score(lr, X, y, cv=2))

Tune Your Model

Grid Search

>>> from sklearn.grid search import GridSearchCV >>> params = {"n neighbors": np.arange(1,3), "metric": ["euclidean", "cityblock"]}

>>> grid = GridSearchCV(estimator=knn, param grid=params) >>> grid.fit(X train, y train)

>>> print(grid.best score)

>>> print(grid.best_estimator .n neighbors)

Randomized Parameter Optimization

>>> from sklearn.grid search import RandomizedSearchCV >>> params = $\{"n_{neighbors}": range(1,5),$

n iter=8, random state=5)

>>> rsearch.fit(X train, y train) >>> print(rsearch.best score)

Python For Data Science Cheat Sheet **Matplotlib**

Matplotlib

Matplotlib is a Python 2D plotting library which produces publication-quality figures in a variety of hardcopy formats and interactive environments across matplotlib platforms.

Prepare The Data

Also see Lists & NumPy

```
>>> import numpy as np
>>> x = np.linspace(0, 10, 100)
>>> v = np.cos(x)
>>> z = np.sin(x)
```

2D Data or Images

```
>>> data = 2 * np.random.random((10, 10))
>>> data2 = 3 * np.random.random((10, 10))
>>> Y, X = np.mgrid[-3:3:100j, -3:3:100j]
>>> U = -1 - X**2 + Y
>>> V = 1 + X - Y**2
>>> from matplotlib.cbook import get sample data
>>> img = np.load(get sample data('axes grid/bivariate normal.npy'))
```

Create Plot

```
>>> import matplotlib.pyplot as plt
```

```
>>> fig = plt.figure()
>>> fig2 = plt.figure(figsize=plt.figaspect(2.0))
```

All plotting is done with respect to an Axes. In most cases, a subplot will fit your needs. A subplot is an axes on a grid system.

```
>>> fig.add axes()
>>> ax1 = fig.add subplot(221) # row-col-num
>>> ax3 = fig.add subplot(212)
>>> fig3, axes = plt.subplots(nrows=2,ncols=2)
>>> fig4, axes2 = plt.subplots(ncols=3)
```

Plot Anatomy & Workflow

Workflow

```
The basic steps to creating plots with matplotlib are:
       1 Prepare data 2 Create plot 3 Plot 4 Customize plot 5 Save plot 6 Show plot
                >>> import matplotlib.pyplot as plt
                >>> x = [1,2,3,4]
               >>> y = [10, 20, 25, 30]
                >>> fig = plt.figure() < Step 2
                >>> ax = fig.add subplot(111) < Step 3
                >>> ax.plot(x, y, color='lightblue', linewidth=3) Step 3, 4
                >>> ax.scatter([2,4,6],
                                [5, 15, 25],
                                color='darkgreen',
                                marker='^')
               >>> ax.set xlim(1, 6.5)
               >>> plt.savefig('foo.png')
```

Customize Plot

Colors, Color Bars & Color Maps

```
>>> plt.plot(x, x, x, x**2, x, x**3)
>>> ax.plot(x, y, alpha = 0.4)
>>> ax.plot(x, y, c='k')
>>> fig.colorbar(im, orientation='horizontal')
>>> im = ax.imshow(img,
                   cmap='seismic')
```

Markers

>>>	fig, ax = plt.subplots()
>>>	<pre>ax.scatter(x, y, marker=".")</pre>
>>>	ax.plot(x,y,marker="o")

```
>>> plt.plot(x,y,linewidth=4.0)
>>> plt.plot(x,y,ls='solid')
>>> plt.plot(x,y,ls='--')
>>> plt.plot(x,y,'--',x**2,y**2,'-.')
>>> plt.setp(lines,color='r',linewidth=4.0)
```

Text & Annotations

```
>>> ax.text(1,
            -2.1,
            'Example Graph',
           style='italic')
>>> ax.annotate("Sine",
                 xy = (8, 0),
                 xycoords='data'
                 xytext = (10.5, 0),
                 textcoords='data',
                 arrowprops=dict(arrowstyle="->".
                              connectionstyle="arc3"),)
```

Mathtext

```
Limits, Legends & Layouts
```

Limits & Autoscaling

>>> plt.show()

>>> plt.title(r'\$sigma i=15\$', fontsize=20)

```
>>> ax.margins(x=0.0,y=0.1)
                                                           Add padding to a plot
>>> ax.axis('equal')
                                                           Set the aspect ratio of the plot to 1
>>> ax.set(xlim=[0,10.5],ylim=[-1.5,1.5])
                                                           Set limits for x-and v-axis
>>> ax.set xlim(0,10.5)
                                                           Set limits for x-axis
 Leaends
                                                           Set a title and x-and y-axis labels
>>> ax.set(title='An Example Axes',
             vlabel='Y-Axis',
             xlabel='X-Axis')
>>> ax.legend(loc='best')
                                                           No overlapping plot elements
                                                           Manually set x-ticks
>>> ax.xaxis.set(ticks=range(1,5),
                    ticklabels=[3,100,-12,"foo"])
                                                           Make y-ticks longer and go in and out
>>> ax.tick params(axis='y',
```

Subplot Spacing

```
>>> fig3.subplots adjust(wspace=0.5,
                         hspace=0.3,
                         left=0.125,
                         right=0.9,
                         top=0.9,
                         bottom=0.1)
>>> fig.tight layout()
Axis Spines
```

Adjust the spacing between subplots

Fit subplot(s) in to the figure area

>>> ax1.spines['top'].set visible(False) Make the top axis line for a plot invisible

>>> ax1.spines['bottom'].set position(('outward',10)) Move the bottom axis line outward

Plotting Routines

```
>>> fig, ax = plt.subplots()
>>> lines = ax.plot(x,y)
>>> ax.scatter(x,y)
>>> axes[0,0].bar([1,2,3],[3,4,5])
>>> axes[1,0].barh([0.5,1,2.5],[0,1,2])
>>> axes[1,1].axhline(0.45)
>>> axes[0,1].axvline(0.65)
>>> ax.fill(x,y,color='blue')
>>> ax.fill between(x,y,color='yellow')
```

Draw points with lines or markers connecting them Draw unconnected points, scaled or colored Plot vertical rectangles (constant width) Plot horiontal rectangles (constant height) Draw a horizontal line across axes

Draw a vertical line across axes

Draw filled polygons Fill between v-values and o

Vector Fields

>	>> axes[0,1].arrow(0,0,0.5,0.5)	Add an arrow to the axes
>	>> axes[1,1].quiver(y,z)	Plot a 2D field of arrows
>	>> axes[0,1].streamplot(X,Y,U,V)	Plot a 2D field of arrows

Data Distributions

>>>	ax1.hist(y)	Plot a histogram
>>>	ax3.boxplot(y)	Make a box and whisker plot
>>>	ax3.violinplot(z)	Make a violin plot

2D Data or Images

>>> fig, ax = plt.subplots()

```
>>> im = ax.imshow(img,
                   cmap='gist earth',
                   interpolation='nearest',
                   vmin=-2.
                   vmax=2)
```

Colormapped or RGB arrays

>>>	axes2[0].pcolor(data2)
>>>	axes2[0].pcolormesh(data)
>>>	CS = plt.contour(Y, X, U)
>>>	axes2[2].contourf(data1)
>>>	axes2[2] = ax clabel(CS)

Pseudocolor plot of 2D array Pseudocolor plot of 2D array Plot contours Plot filled contours Label a contour plot

Save Plot

direction='inout'.

length=10)

Save figures >>> plt.savefig('foo.png') Save transparent figures >>> plt.savefig('foo.png', transparent=True)

Show Plot

>>> plt.show()

>>> plt.cla()	Clear an axis				
>>> plt.clf()	Clear the entire figure				
>>> plt.close()	Close a window				

Python For Data Science Cheat Sheet (3) Plotting With Seaborn Seaborn

Statistical Data Visualization With Seaborn

The Python visualization library Seaborn is based on matplotlib and provides a high-level interface for drawing attractive statistical graphics.

Make use of the following aliases to import the libraries:

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
```

The basic steps to creating plots with Seaborn are:

- 1. Prepare some data
- 2. Control figure aesthetics
- 3. Plot with Seaborn
- 4. Further customize your plot

```
>>> import matplotlib.pyplot as plt
>>> import seaborn as sns
>>> tips = sns.load dataset("tips")
                                        Step 1
>>> sns.set style("whitegrid")
                                        Step 3
>>> g = sns.lmplot(x="tip",
                   v="total bill",
                   data=tips,
                   aspect=2)
>>> g = (g.set axis labels("Tip", "Total bill(USD)").
set(xlim=(0,10),ylim=(0,100))
>>> plt.title("title")
>>> plt.show(q)
```

Data Also see Lists, NumPy & Pandas

```
>>> import pandas as pd
>>> import numpy as np
>>> uniform data = np.random.rand(10, 12)
>>> data = pd.DataFrame({'x':np.arange(1,101),
                          y':np.random.normal(0,4,100)})
```

Seaborn also offers built-in data sets:

>>> sns.axes style("whitegrid")

```
>>> titanic = sns.load dataset("titanic")
>>> iris = sns.load dataset("iris")
```

Axis Grids

```
>>> g = sns.FacetGrid(titanic,
                      col="survived",
                       row="sex")
>>> g = g.map(plt.hist, "age")
>>> sns.factorplot(x="pclass",
                   y="survived",
                   hue="sex",
                   data=titanic)
>>> sns.lmplot(x="sepal width",
               y="sepal length",
               hue="species",
               data=iris)
```

Subplot grid for plotting conditional relationships

Draw a categorical plot onto a Facetgrid

Plot data and regression model fits across a FacetGrid

```
>>> h = sns.PairGrid(iris)
                                         Subplot grid for plotting pairwise
>>> h = h.map(plt.scatter)
                                         relationships
>>> sns.pairplot(iris)
                                         Plot pairwise bivariate distributions
>>> i = sns.JointGrid(x="x",
                                         Grid for bivariate plot with marginal
                                         univariate plots
                        data=data)
>>> i = i.plot(sns.regplot,
                 sns.distplot)
                                         Plot bivariate distribution
>>> sns.jointplot("sepal length"
                     "sepal width",
                    data=iris,
```

Categorical Plots

Scatterplot Scatterplot with one >>> sns.stripplot(x="species", categorical variable y="petal length", data=iris) >>> sns.swarmplot(x="species", Categorical scatterplot with non-overlapping points y="petal length", data=iris) **Bar Chart** Show point estimates and >>> sns.barplot(x="sex", confidence intervals with y="survived", hue="class", scatterplot glyphs data=titanic) Count Plot Show count of observations >>> sns.countplot(x="deck", data=titanic,

palette="Greens d")

palette={"male":"g",

markers=["^","o"], linestyles=["-","--"])

"female": "m" },

data=titanic,

hue="sex",

y="sex", hue="survived",

data=titanic)

Show point estimates and confidence intervals as rectangular bars

Boxplot

Point Plot

y="age",
hue="adult male",
data=titanic)
>>> sns.boxplot(data=iris,orient="h")
Violinplot

>>> sns.pointplot(x="class",

>>> sns.boxplot(x="alive",

>>> sns.violinplot(x="age",

Boxplot

Boxplot with wide-form data

Violin plot

```
Plot data and a linear regression
>>> sns.regplot(x="sepal width",
                                         model fit
                  v="sepal length",
                  data=iris,
```

kind='kde')

Distribution Plots

Regression Plots

```
>>> plot = sns.distplot(data.y,
                                         Plot univariate distribution
                           kde=False,
                           color="b")
```

Matrix Plots

>>> sns.heatmap(uniform data,vmin=0,vmax=1) Heatmap

Further Customizations

Axisarid Objects

>>>	g.despine(left=True)	Remove left spine
>>>	g.set ylabels("Survived")	Set the labels of the y-axis
>>>	g.set xticklabels(rotation=45)	Set the tick labels for x
>>>	g.set_axis_labels("Survived",	Set the axis labels
	"Sex")	
>>>	h.set(xlim=(0,5),	Set the limit and ticks of the
	ylim=(0,5),	x-and y-axis
	xticks=[0,2.5,5],	

Plot

>>> plt.title("A Title") >>> plt.ylabel("Survived")	Add plot title Adjust the label of the y-axis
>>> plt.xlabel("Sex") >>> plt.ylim(0,100)	Adjust the label of the x-axis Adjust the limits of the y-axis
>>> plt.xlim(0,10)	Adjust the limits of the x-axis
>>> plt.setp(ax,yticks=[0,5]) >>> plt.tight_layout()	Adjust a plot property Adjust subplot params

Figure Aesthetics Also see Matplotlib

>>> f, ax = plt.subplots(figsize=(5,6)) Create a figure and one subplot Seaborn styles (Re)set the seaborn default >>> sns.set() Set the matplotlib parameters >>> sns.set style("whitegrid") Set the matplotlib parameters >>> sns.set style("ticks",

{"xtick.major.size":8,

"vtick.major.size":8})

Return a dict of params or use with with to temporarily set the style

Context Functions >>> sns.set context("talk") Set context to "talk" Set context to "notebook", >>> sns.set context("notebook", font scale=1.5, scale font elements and rc={"lines.linewidth":2.5}) override param mapping

Color Palette

	sns.set_palette("husl",3) sns.color palette("husl")	Define the color palette Use with with to temporarily set palette
>>>	flatui = ["#9b59b6","#3498db".	"#95a5a6","#e74c3c","#34495e","#2ecc71"]
>>>	sns.set palette(flatui)	Set your own color palette

Show or Save Plot

>>> plt.show() >>> plt.savefig("foo.png") >>> plt.savefig("foo.png", transparent=True)

yticks=[0,2.5,5])

Show the plot Save the plot as a figure Save transparent figure

Close & Clear

>>> plt.cla() >>> plt.clf()	Clear an axis Clear an entire figure
>>> plt.close()	Close a window

Python For Data Science Cheat Sheet 3 Bokeh

Plotting With Bokeh

The Python interactive visualization library **Bokeh** enables high-performance visual presentation of large datasets in modern web browsers.

Bokeh's mid-level general purpose bokeh.plotting interface is centered around two main components: data and glyphs.

The basic steps to creating plots with the bokeh.plotting interface are:

1. Prepare some data:

Python lists, NumPy arrays, Pandas DataFrames and other sequences of values

- 2. Create a new plot
- 3. Add renderers for your data, with visual customizations
- 4. Specify where to generate the output
- 5. Show or save the results

1) Data

Also see Lists, NumPy & Pandas

Under the hood, your data is converted to Column Data Sources. You can also do this manually:

2) Plotting

>>> cds df = ColumnDataSource(df)

Glyphs

Renderers & Visual Customizations

Customized Glyphs

Also see Data

Selection and Non-Selection Glyphs

Hover Glyphs

- >>> from bokeh.models import HoverTool >>> hover = HoverTool(tooltips=None, mode='vline') >>> p3.add tools(hover)

Colormapping

Legend Location

Legend Orientation

```
>>> p.legend.orientation = "horizontal"
>>> p.legend.orientation = "vertical"
```

Legend Background & Border

>>> p.add layout(legend, 'right')

```
>>> p.legend.border_line_color = "navy"
>>> p.legend.background_fill_color = "white"
```

Rows & Columns Layout

>>> from bokeh.layouts import row >>> layout = row(p1,p2,p3) Columns >>> from bokeh.layouts import columns >>> layout = column(p1,p2,p3) Nesting Rows & Columns >>>layout = row(column(p1,p2), p3)

Grid Layout

```
>>> from bokeh.layouts import gridplot
>>> row1 = [p1,p2]
>>> row2 = [p3]
>>> layout = gridplot([[p1,p2],[p3]])
```

Tabbed Layout

```
>>> from bokeh.models.widgets import Panel, Tabs
>>> tab1 = Panel(child=p1, title="tab1")
>>> tab2 = Panel(child=p2, title="tab2")
>>> layout = Tabs(tabs=[tab1, tab2])
```

Linked Plots

Output & Export

Notebook

>>> layout = row(p4,p5)

```
>>> from bokeh.io import output_notebook, show
>>> output notebook()
```

HTML

Standalone HTML

```
>>> from bokeh.embed import file_html
>>> from bokeh.resources import CDN
>>> html = file html(p, CDN, "my plot")
```

```
>>> from bokeh.io import output_file, show
>>> output file('my bar chart.html', mode='cdn')
```

Components

```
>>> from bokeh.embed import components
>>> script, div = components(p)
```

PNG

```
>>> from bokeh.io import export_png
>>> export png(p, filename="plot.png")
```

SVG

```
>>> from bokeh.io import export_svgs
>>> p.output_backend = "svg"
>>> export svgs(p, filename="plot.svg")
```

5) Show or Save Your Plots

J.	, show or save rour	1 1003	
		>>> show(layout) >>> save(layout)
